

COMPANY _____ PROFILE

Executive Summary

JPT Plastic Sdn Bhd is a leading Malaysian company specializing in plastic recycling, with a primary focus on the development and marketing of plastic materials. As Malaysia's fastest-growing plastic recycling service provider, JPT Plastic is a 100% Malaysian-owned entity, operating out of Klang, Selangor.

Founded in 2005 by a group of industry veterans with over a decade of experience in plastic recycling, JPT Plastic was established to deliver prompt, courteous, and safe services across Malaysia. The company is committed to meeting the recycling needs of its clients efficiently and effectively.

In addition to recycling services, JPT Plastic also sells a variety of plastic-related materials and services as part of its business operations. The company primarily operates within Malaysia, with its headquarters located in Klang, Selangor. As of August 2024, JPT Plastic employed approximately 100 staff members, not including contractors and partners.

About Us

VISION

Our vision is to seamlessly integrate charitable efforts with our business to build stronger communities and create lasting social value. By sharing our vision, values, and expertise, we aim to develop recycling partnerships that positively impact lives.

MISSION

Our mission is to produce high-quality recycled plastic that can be transformed into beautiful and functional materials. We strive to foster a dynamic and adaptable downstream plastic industry that fully meets the evolving demands of both domestic and export markets. Additionally, we are committed to creating employment opportunities and promoting a positive, well-informed environmental image and perception.

COMPANY VALUE STATEMENT

JPT Plastic Sdn Bhd is Malaysia's fastest-growing plastic recycling service provider. As a 100% Malaysian-owned company, we operate out of Klang, Selangor, and were established in 2006 by a team of seasoned veterans with extensive experience in the plastic recycling industry.

Our team is comprised of friendly, knowledgeable, and dedicated professionals who are committed to providing prompt, courteous, and safe service across Malaysia. We ensure that our staff is well-trained, equipped with the appropriate Personal Protective Equipment (PPE), and supported by world-class equipment to complete all tasks safely and on time.

With a focus on superior quality and service, we are dedicated to solving our customers' recycling challenges efficiently and effectively.

Managing Director

Dato' Seri T. Jegathisan, the Managing Director of JPT Plastic Sdn Bhd, brings over 18 years of experience in the plastic recycling industry. A visionary leader and industry expert, Dato' Seri T. Jegathisan has been instrumental in driving the company's growth and success since its inception in 2005. Under his leadership, JPT Plastic has become Malaysia's fastest-growing plastic recycling service provider, known for its commitment to quality, innovation, and sustainability. His dedication to building strong partnerships and fostering a culture of excellence has positioned JPT Plastic as a key player in the industry, both domestically and internationally.

Organizational Chart

Our Core

Throwing away plastic bottles instead of recycling them often results in these materials ending up in landfills or oceans. Many landfills are already overcrowded, and the space they occupy could be used for other purposes. Additionally, landfill waste can release pollutants into the soil and water. Ocean wildlife frequently ingests small pieces of residual plastic, which can eventually end up on our plates.

At JPT Plastics, our goal is to help you earn money by becoming your recycling partner and assist you in reducing your carbon footprint. Through our Toll Service plans, we offer more than just recycling plastic regrinds and scrap. We provide comprehensive services including grinding, custom blending, granulating, and silo management. From our processing plant in Klang, Malaysia, we can demonstrate how recycling your plastic waste can positively impact both your bottom line and the environment.

Service Process Flow

Crushing

The raw materials that have been sorted are crushed, chopped into flakes by a machine. In waste plastics recycling process, waste plastics crushing is one of the most important processes, the volume of waste plastic is reduced, which is convenient for subsequent processing

Pelletizing

The final step for most plastic recycling is to pelletize. Converting post-consumer plastic into pellets allows for easier distribution and remanufacturing, and ultimately benefits the speed and effectiveness of reintroducing recycled plastic into industrial manufacturing. At the end of this process, the plastic is ready to be extruded into smaller, manageable pellets

Quality Assurance

This process ensures that the recycled plastic pellets consistently meet the required standards for performance and durability. Additional inspections to verify that the pellets are free from defects and contamination, ensuring they are of the highest quality before being delivered to clients. This final check guarantees that the materials are reliable and ready for use in industrial manufacturing processes.

Sorting

JPT Plastic purchase the raw materials and store at the specific area. The raw materials are sorted according to their resin and plastic type. This is crucial because contamination can render a batch of materials unsuitable for reprocessing. The sorting is done manually or with machines

Washing

The washing line supplies a continuous hot spray over a stream of plastic material, removing some or all of the labels and dirt attached to the plastic surface. Detergents and disinfecting agents are often included in this process to improve the level of cleaning. This process is carefully conducted by fulfilling all the government requirements.

Lab Testing

Before these pellets are ready for use, we conduct thorough lab testing to ensure they meet industry standards. We check for consistency, melt flow, and contamination, ensuring the recycled plastic is of high quality and ready for industrial applications. This process guarantees that our clients receive reliable, sustainable materials for their production needs.

Packaging

We use secure, durable packaging methods to ensure the pellets remain intact and uncontaminated. Proper labeling and packaging also make it easy for clients to handle, store, and use the pellets efficiently in their manufacturing processes. This final step ensures the pellets are ready for safe and efficient delivery to clients.
